

Seeding Teams

Last Modified on 23/08/2016 1:04 pm AEST

Seeding assigns a number to the team which is used to determine their fixtures based off the fixture template. Fixtures can then be generated based upon the teams' seedings and automatically create the required fixture for the competition.

Quick Steps: Go to Competitions > select the relevant competition > Teams > Seeding

1. Within the Management Console, select **COMPETITIONS** from the top menu, then **COMPETITIONS** from the left menu.
2. Select the relevant competition from the listing and then **TEAMS** from the expanded left menu.
3. Click **SEEDING** at the top of the page.
4. Drag and drop each team from the Teams list into a number within the seeding list and then click **SAVE** to add a club.
